At

The
Chinook Hotel

Mr James Guss of Munson spent the week end at the home of his mother.

Miss Mae Todd, teacher at Oyen spent last week end with her parents.

Miss Betty Milligan spent the week end with her parents in Chinook.

Mr & Mrs. W. E. Anderson visited last week at the home of Mr. and Mrs. Jeff Thomas at the river.

Relief Officers Hold Conference at Chinook

A meeting was held in the Chinook Hotel last Saturday at which A. A. MacKenzie, supervisor of charity and relief for the province of Alberta, addressed a large gathering. Mr. MacKenzie was accompanied by A. M. Ried, his assistant in this work. The meeting considered ways and means of carrying on the necessary relief throughout the eastern district, with proposals for work in which recipients of relief might discharge their obligations. Suggestions on relief work favor construction of dams, large and small, throughout the country tributary to the C. N. R. line, also some road work.

Colholme Council Endorses The Pearce Stock Watering Scheme

Scheme For Dams Here Is Chinook Consolidated School Report for April

At the last meeting of the Colholme council it was decided to endorse the Pearce Stock Watering Scheme and have the secretary write Robert Gardner M. P., for this constituency, now at Ottawa, asking him to push this scheme and give it all the consideration possible.

Another plan also endorsed by the council was the one outlined by Lorne Proudfoot M. L. A., for the construction of dams in this country.

This would be a great help to the farmers in this district in that they would have water for their stock during the summer months, which they haven't had for the past few years.

This plan would also give the people the privilege of paying back their relief by working on this project.

Hoppers Hatching on Sunny Slopes at Nanton

NANTON, May 4 (Special).—Grasshoppers are commencing to hatch on the sunny slopes and sheltered places here. An observer who watched a similar infestation of grasshoppers 12 years ago in south-western Manitoba, noticed that the first batch hatched out just as poplars were coming in to full leaf, indicating it takes about the same amount of heat to incubate hoppers as to bring trees out in full leaf.

At present it is only where the ground is warm that incubation has taken place, and even there a search of the ground about an inch or an inch and a half under the surface reveals considerable number of egg pods still in their natural state. It is impossible to say if something has happened to these pods so they will not hatch or whether they are a little deeper in the soil.

The young hoppers now jumping are not numerous, about 5 to 10 to the square foot. There are two distinct varieties, one a dull black and the other a light grey. Neither have any noticeable wing development, but they can jump from 6 to 12 inches, although they are only about the size of an average mosquito.

Heat Wave Gripping U. S. Drouth Areas; 100 Above in Iowa

CHICAGO, May 7.—A merciless sun, beating down on the parched prairies of the north central states, gave no prospect of relief to the drouth stricken areas of the United States on Monday. Only some moderation in the high temperatures of Sunday was predicted.

Sioux City, Iowa, broke all records for May at 100. In Chicago the mercury jumped to 92.1. One death was indirectly attributed to the heat.

Hot winds swept parts of Nebraska, adding to the drouth peril. Kansas, Missouri, Wisconsin and Minnesota remained rainless and the moisture deficiency in Northern Illinois reached 61 per cent since January 1.

FORT VERMILION, May 3 (C. P.).—With the ferry out of commission by the flood which wrought havoc with homes in North Vermilion and on the south side of the river last Friday, efforts to keep communication established between the two sections of this settlement are carried on in a dangerous manner. The ferry will be out of service for about three weeks.

Crossings are being made in

small boats which navigate the treacherous current and swollen waters of the mighty Peace river, while a high wind Thursday was making the crossings doubly dangerous.

With the river once more within its banks, residents are making valiant efforts to rehabilitate themselves in the homes that were inundated when the ice jam burst on Friday and swamped them with ice and water.

Simpler Problems Baffle Man

While world opinion is disturbed and distorted by threats of war and general unrest, while thoughts of budgetary deficits and problems of trade engage anxious minds at home, it is inspiring to turn to conquests of the physical universe which, from time to time, demonstrate man's ability to master infinitely greater problems than those which threaten his peace, security and prosperity. The statement may be trite and commonplace, but it is nonetheless true, that man's ingenuity in solving the riddles of the universe is in marked contrast with his apparent stupidity and futility in seeking solutions of others directly within his own purview and which, as a matter of fact, are his own creation.

The thought is suggested by recent addition to scientific knowledge of the atmosphere which is now known to consist of four layers—the troposphere, the stratosphere, the ozonosphere and the ionosphere. The troposphere, the layer closest to earth's surface, is the stratum of changing temperatures and pressures and of wind-driven clouds. As long ago as 1899, it was discovered, by temperature tests, that this layer terminated relatively abruptly at a height of between six and seven miles. Beyond this height, the temperature was found to be relatively constant up to about 23 miles. This layer of calm, cloudless air of uniform temperature is the stratosphere of comparatively recent conquest by balloon ascension.

As this is written, a prairie dust storm occludes the sun, and, as a result, there is a marked fall in temperature. It is palpably cooler. It happens that calculations concerning dust show into the stratosphere by volcanoes prove similar cooling effects. If one seven-hundredth of a cubic mile of fine dust were blown into the stratosphere it could form a screen which would reduce the intensity of the sun's rays by 20 per cent. The screen would remain suspended in that still windless zone for years, and it has been suggested that the ice ages have been caused by such volcanic dust-screens.

Recent research has shown that, above 23 miles and extending up to 38 miles, is another layer rich in ozone and, for that reason, called the ozonosphere. The significance of this layer so far as human history is concerned, lies in the fact that, because it is absorptive of ultra-violet rays from the sun, the earth is adapted to human habitation. Without this screen, it is said, organic life on earth would be wiped out by sun-stroke.

The ozonosphere, unlike the stratosphere, is not cold but hot. Above it and beginning at 50 miles, lies another layer, the ionosphere, so-called because the gases of the air in that region are in an electrically excited or ionized state. The secrets of this stratum are yielding to radio research although its existence had been deduced, long before the advent of the radio, to explain some of the earth's magnetic phenomena. The ionized particles have the property of reflecting radio waves back to earth and it has been revealed there are two main layers in the ionosphere, at 64 and 112 miles respectively, which reflect these waves. Each of these is split into two during the daytime making a total of four layers. These four layers probably mark the heights at which particular constituents of the atmosphere become electrified or ionized.

Recent research has further demonstrated that the electrification in the layers is more intense in summer than in winter, the condition being normally due to ultra-violet rays from the sun. Thunderstorms also play their part, it having been calculated that the electrical energy continually released in thunderstorms is more than sufficient to produce all the observed ionization in the ionosphere.

That scientific progress is indicative of investigation of the seemingly inaccessible have produced so much positive achievement in striking contrast with the meagre fruits of the efforts of politicians, statesmen, economists and "brain trusts" to solve the problems of man's social and economic relationships. It suggests the thought that, were scientifically trained minds set free and independently to work, by universal agreement, upon the problems which seem destined to perpetuate embattled borders between peoples of kindred cultures and similar aspirations, their solution quickly would be forthcoming. The rest would be up to us.

FINE QUALITY TEA
ALWAYS ECONOMICAL

Packers of the finest teas such as "Salada" have been forced to increase prices. As soon as merchants' stocks at present low prices are depleted your favourite beverage will cost you slightly more. This has been brought about by advances at the gardens where production has been purposely restricted in order to save the growers from further disastrous loss. But this comforting beverage is still the cheapest drink in the world next to water itself.

Charting Coast Of Labrador

British Naval Surveying Ship Challenger Engaged In Work

The British naval surveying ship Challenger, has sailed from Portsmouth to resume her task of charting the coast of Labrador. This work has never been completed. Last year the admiralty started the Challenger upon the work because it has become necessary to provide safe channels for navigation along this dangerous coast owing to the development of Labrador. The survey will take years to complete.

A new type of plane with folding wings may be stored in a small space.

MILBURN'S
HEALTH
AND
NERVE PILLSWeary Days—Sleepless Nights
Wrack the Nervous System

Men and women too night after night on sleepless beds. Their eyes do not close in the refreshing repose that comes to those whose nerves are right. They are irritable and nervous, weak and worn out, and everything looks dark and gloomy.

Milburn's H. & N. Pills is the remedy that is required to restore them the blessing of good health. They bring back the sound refreshing sleep, tone up the nerves, and impart that sense of buoyancy to the spirits that is the result of renewed mental and physical vigor.

Deep Sea Exploration

Diver Will Spend Six Months Studying Fish In Ocean's Depths

Even though he plans to drop 3,000 feet down into the depths of the ocean in a diving globe, William Beebe doesn't expect any sea serpents.

"I saw one once," he said, "a thin wrinkling like weathered face. 'Then I took a second look. At first glance, it was a tremendous sea serpent writhing away into the horizon. It turned out to be the Atlantic cable."

Mr. Beebe was making last preparations for his departure for St. George, Bermuda, where he will spend six months studying deep sea fish and the strange, weird lives they lead.

CAST OFF UGLY FAT

Woman Loses 28 lbs. in 3 Months

"Three months ago," a woman writes, "I was persuaded to try Kruschen Salts to reduce my weight, which was 222 lbs. I had tried other things, but all to no avail. Now I know that Kruschen Salts are different. In three weeks I lost 5 lbs., and I felt five years younger. I really must say I feel a different woman. I have now lost 28 lbs. to date." (Mrs. S. G. B.)

If you are overweight take one half-teaspoonful of Kruschen Salts in a glass of hot water before breakfast every morning. There will be no rapid or alarming loss of weight, but a steady decrease of that flabby fat which is as unhealthy as it is unsightly. Kruschen is a scientific blend of six mineral salts found in the waters of those European spas that have been used by generations of overcast people to reduce weight.

Got Post War Job

Showed One-Armed Man Who Did Great Things For England

The story how Sir Edward Hilton Young, minister of health, who lost an arm in the 1918 raid on Zeebrugge, got a post-war job with the admiralty was told in a speech by Lord Riddell, Sir Edward, Lord Riddell said, came back from active service and sought a position with the admiralty only to be told there was "no room for a one-armed man."

Sir Edward, he said, retorted: "Well, come with me to Trafalgar Square and I'll show you a one-armed man who did great things for England."

That, concluded Lord Riddell, was too much, "even for the admiralty" and one of his chiefs replied: "If you are another Nelson we will take you on."

When the farmer is prosperous, all the world is prosperous. That, however, is a fact which too few people and too few governments have learned to appreciate.

Under the new Rights-of-Way Act in England tens of thousands of footpaths have been given almost the status of highways.

Russian Aviators Have

Completed Big Task

Rescued 101 People From Floating Ice Off Siberian Coast

Two months ago 101 Russians were wrecked on floating ice between Wrangel Island and the coast of Siberia. Since that time the efforts of Russian aviators in rescuing the 101 a few at a time has held the interest and admiration of the world. The task was recently completed. Not a life was lost.

Moscow, aware of the rich mineral resources of this Arctic island whose inaccessibility has become proverbial, rashly determined to populate it with permanent colonists. Of the 101 there were ten women and two children. After their ship had been crushed, the adventurers, who had plenty of food and fuel, built living quarters on the ice and were not uncomfortable in spite of the sub-zero temperatures. They suffered little, but they were constantly in peril, for the breaking up of the ice might bring death at any moment.

The organization of the relief work was thorough and systematic, and its success is a tribute both to the skill and to the indomitable courage of the Russian aviators. It is not without reason that Moscow is celebrating, and praising the efficiency of Soviet organization, the hardihood of the marooned men and women, and the devotion and ability of the rescuers. One Moscow newspaper comments, perhaps with reason, that if the disaster had occurred in the days of the czar the Wrangel colonists would all have perished while bureaucratic officials argued as to which department should undertake the rescue.—Cleveland Plain Dealer.

Light Clothes For Warmth

Several Layers Better Than Small Number Of Heavy Ones

Very thick, heavy garments are not so helpful in enabling one to keep warm as might be supposed. A far better way to defy the cold is to wear a larger number of light ones. The late Lord Kelvin was a great believer in this method. On one occasion when he was making tests of his sounding machine on a battleship on a bitterly cold day, he was asked why he did not wear an ulster. His reply was that he did not need one. The colder the weather, the more thin underests he put on, and the air between them insulated his body from the freezing winds. Many fishermen have also found that several layers of light garments are more useful than a small number of heavier ones, and act accordingly when facing the intense cold frequently encountered on their winter fishing trips.

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Optician, Calgary

NO. 12—CONSERVATION OF THE EYESIGHT

A world of beauty, emotion and ideas floods the brain through the eye. Sight is the medium by which beauty of the human face, form and of all external life, is presented to us; by which the various expressions of passion and thought, of hope, joy and pain are discerned and by which we take hold of a large portion of the pleasures, sorrows and possibilities of our very existence.

Under normal conditions we use about one half of our total nerve energy in the function of vision—one hundred times as much as is required for hearing.

To all of us the value of sight is pre-eminent. It is the most cherished of the five senses. It is the most used and, thoughtlessly and through ignorance, the most abused.

A greater appreciation of sight is not necessary but a greater appreciation of the importance of eye-care is needed.

A large majority of the human race have eye defects, most of which are remedial. A lack of knowledge of the actual condition of each eye as regards the visual acuity and mus-

cular balance, as well as a lack of proper eye care, is in a large measure responsible for much needless suffering and inefficiency. Many people live to middle life before discovering that the vision of the two eyes is not the same. This condition of course puts too much strain on the better eye and the poorer one gradually gets worse from lack of use.

So many people are inclined to think their eyes are normal because they "see alright". Apart from the fact of whether or not both eyes have normal vision, many persons suffer from headaches, nervousness and kindred complaints due to faulty balanced eye muscles. One muscle being too weak, the eye would "tend" to turn toward the opposite or stronger muscle, but the brain desiring to see a single object where only one exists, keeps the eyes straight by using up excess nerve energy for the weak muscle, thus depriving other organs of the body of their proper share. Is it not therefore the part of wisdom to have a skillful Optometrist advise you whether or not your eyes are as they should be? (Concluded)

I Have Written These Twelve Articles

that you may better understand various eye conditions—the DANGER of neglect or wearing glasses NOT expressly made for YOUR eyes.

Can a physician operate properly in a dark? Your EYESIGHT is so important to your health that after a SCIENTIFIC examination with modern instruments in an office arranged FOR THE PURPOSE and by an expert, you will be assured of a "CROWE EXAMINATION". It's a fact.

No charge for examinations. You are under no obligation and— we make complete glasses as low as \$5.00.

Take no chances with your eyesight—IT DOES NOT PAY.

Canada's Bill For Education

Public Expenditure Of About One Hundred And Sixty-Five Million Annually

Public expenditure on education in Canada amounts to \$38.83 a year for every student attending school. A recent report issued by the Canadian government shows that education involves a public expenditure of about \$185,000,000 yearly.

Education in Canada is under the control of the provinces, except for the task of instructing the Indians who are wards of the Dominion government. The provincial governments have made ample provision for primary, secondary, and higher education. In each province there is a complete system of public and high schools, aided by the government with liberal grants, while in each province there is also one or more universities where, in addition to the courses in arts and science, there are faculties of medicine, law, and dentistry. Technical schools and agricultural colleges, where those who desire to specialize along these lines may have an opportunity to fit themselves for their life work, are found in every province.

In 1932 there were 32,901 educational institutions in Canada employing 86,216 teachers and attended by 2,593,116 pupils, almost 25 per cent. of the whole population.

Where Talent Is Developed

Individuality Of Members Brought Out In English Institutes

People talk of the equality of mankind, yet nothing is so absurd as the equality of mankind, declared Mrs. J. C. Douglas, president of the South-Atlantic, England, branch of the British Women's Institutes, who she was entertained in Edmonton.

"It is the inequality of mankind that is the destructive and all-important factor in human affairs," Mrs. Douglas went on. "This is particularly noticeable in our English Institutes, where diversity is the very essence of our unity."

"Immediately a member enters the door she becomes a member of the Institute and nothing more. The character of the member has nothing to do with her background, and for this very reason, hundreds of women are discovering themselves to have undreamed-of talents. Every member does something different. Each is encouraged to develop her own individuality, and herein lies the success of the movement."

Rafferty: "The new boss of the factory'll be an old-fashioned man, I'm thinkin'."

O'Hara: "He's so old-fashioned he will be takin' the belts from the drive wheels and replacin' them with suspenders."

Husband: "Why did that woman keep you standing at the door for half an hour?"

Wife: "She said she hadn't time to come in."

As a matter of fact, your neighbors think just as disagreeable things about you as you do about them.

Canadian macaroni and vermicelli last year made an entrance into Holland for the first time.

Seems Hard To Solve

Perhaps there ought to be a happy medium between the methods of young scientific students of babies and the methods of their grandmothers. A Baltimore specialist condemns the modern method which leaves babies too much alone. It is curious that after several hundred thousand years' experience the human race has not come to definite conclusions as to how babies should be brought up.

Here and There

The British Columbia Chapter of the I. O. D. E. held its "coming of age" meeting at the Empress Hotel, Victoria, recently, at its twenty-first annual convention. Premier Pattullo welcomed delegates from all over the province, and many distinguished guests were present.

The annual reduction in cost of summer railway travel under the heading of low summer fares, will be put into effect by the Canadian Pacific Railway on May 15th next, according to official announcement. The reduced fares will have extensive limits and stopovers.

Port Hope, on the south bank of the Fraser River, ninety miles from Vancouver by the Canadian Pacific, is a place where the Almighty has most lavishly set down in a land of wonderful beauty rivers and lakes abounding in game fish, writes B. Stone Kennedy, editor of Western Fisheries.

Dr. Frank N. D. Buchanan, leader of the Oxford Group movement, is expected to launch another campaign in western Canada this Spring, commencing at Winnipeg May 1, taking in Regina, Saskatoon, Calgary, Edmonton, Vancouver and Victoria, and culminating with a selective "house party" at the Banff Springs Hotel early in June.

The success of low cost all-expense tours in the Canadian Rockies instituted by Canadian Pacific Railway last summer has prompted the company to repeat these four, five and six-day trips during the coming summer. Each trip affords 126 miles of touring, and can be made either eastbound from Field, B.C., or westbound from Banff, Alberta, at the convenience of passengers.

A. C. Leighton, R.B.A., president of the government art college at Calgary, who will again this summer hold his summer art school for selected students from the Province of Alberta at the Kananaskis Dude Ranch, near Banff, has picked a location surrounded by the most magnificent of Rocky Mountain scenery.

The skunk is not the king of the woods, said George Corson, naturalist, addressing the Kiwanis Club at the Royal York Hotel recently. "Hold him up by his tail," said Mr. Corson, "and he will become innocuous." He didn't tell the Kiwanis if he had actually accomplished this feat.

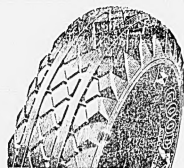

Toronto got its full measure of music-makers lately when the most famous bandmasters of the continent assembled at the Royal York Hotel for their annual convention. Captain Charles O'Neill was the president and they came from all parts of the United States and Canada.

NOTICE

Three games of softball will be played at Rainbow Hall on Friday May 18. The first game commencing at 6 o'clock. The teams competing are: Langhlin, Sunnybrook, Youngstown and Keystone. Advance will be held in the evening. Music supplied by the Sheerness Orchestra. Admission 25c. Ladies please bring lunch.

Wheat Situation Is Improving --- Better Times For Farmers

There is a feeling gradually spreading throughout the world that the worst phases in the wheat situation have been passed and brighter times are ahead for wheat farmers. It is possibly true that there has not been any great diminution in the world wheat surplus but the evidence available goes to show a noticeable trend towards reduced wheat production in Europe and a desire on the part of European countries to turn their backs on self containment as regards wheat. Europe is finding it is a costly matter to bonus wheat growers year after year when a better product is obtainable from wheat exporting countries at a fraction of the price.

The International Wheat Conference in Rome has supplied information that must be of reassuring nature to wheat exporting countries, France, Germany and Italy have given reassurance that they will retrace their steps to some extent in regard to encouragement of domestic production and that in another year they will again be wheat importers on an increased scale. A decrease in wheat acreage has already been recorded in Europe and it is evident that decreases will be made in wheat plantings in many other countries, notably the United States, Australia and to some extent Canada. Another 12 months should see a better balance between supply and demand in the world wheat trade and an improvement in price as a result.

There has been some criticism of the scant improvement in world wheat prices following the signing of the International Wheat Agreement last summer. Some people apparently expected prices immediately to ascend and were disappointed when this did not occur. A better understanding of the entire situation has resulted and the concerted movement has certainly had considerable effect in discouraging increased wheat acreage and in gradually bringing about a reduction in the acreage planted to wheat. The wheat importing and exporting nations now understand each other's problems better and are friendlier and more sympathetically inclined as a consequence. The International Wheat Conference at London and the present conference at Rome have unquestionably done more to bring about better relationship between world nations than any of the numerous world conferences that have been held of recent years. The nations represented are obsessed with the idea that the condition of agriculture throughout the world must be improved and they are striving wholeheartedly to achieve the desired end.

Peyton School Report

Grade 2

Olga (Curt) 79; Donald Anderson 78.1.

Grade 5

Annie Bellmont 76.7.

Grade 6

Barbara Shier 77.3; Bruce Hutchinson 76.8.

Grade 7

Jack Shier 61.3.

Grade 8

Alice Peterson 80.6.

Grade 9

Dorothy Robinson 68.7; Ruth Robinson 66.6.

Grade 10

Irene Shier 71.6; Ernest Peterson 71.1.

Tennis Club Meeting

On Wednesday May 9th a meeting of the Tennis Club was held at the home of Mrs. Chapman. The President and Sec. for last year, Mr. Youell and Mrs. Bennett, were re-elected by a unanimous vote.

The fees for 1934 will be 25. All interested in tennis are cordially invited to join.

On Monday evening there was a nice shower of rain.

Next Sunday May 13th is Mothers' Day.

The Apron sale and Tea which was sponsored by the Ladies' Aid, Saturday afternoon was not as well attended as usual owing to the bad dust storm; however, the aprons were all sold.

Mr. Langley has informed the Advance that there is half a car of potatoes expected to arrive here on Friday.

Perhaps You Have Forgotten that Your Subscription to The Advance is due

If such is the case this will serve as a gentle reminder. We admit that payment of subscription accounts gives us a delightful thrill and helps fill some of the vacant nooks in the old pocket-book.

We are Finding It Hard Sledding, Perhaps it's the Same with You--

If so, and you are right down with the sleigh runners on the gravel don't feel that we want to add any to the load, pay when it's easier, and in the meantime -- "Let's be friends."
